Neighborhood location bracketed services and gigs. We are ANIONS.eos (Autonomous Network of Individuals Offering Neighborhood Services) The US freelance workforce has grown 3X faster than the overall workforce," says Morgan Stanley's head of Global Sustainability Research. "Freelancers now represent over 35% of the total U.S. working population and could represent more than half of the nation's workforce by 2027." Currently an estimated $2 Trillion dollar global industry, the Gig Economy offers freelancers the opportunity to continue working past retirement age, providing both social and economic advantages, while adding flexibility to work schedule. Humans have always desired the advantages of grassroots, local sourced services and products which support their community but due to issues of privacy and security it was not formerly possible. We have solved the issues of privacy and security with range proof cryptography and asymmetric public key encryption. By deploying location range proof smart contracts on the EOS.io blockchain users can hire local service providers and provide their own services using the ANIONS Dapp and implementing the protocols of geo fencing can create communities that foster incentive. Users can drive adoption by becoming Block captains who earn 1% for signing up neighbors within a geographic area. COmmunity members can vote to save a percentage of earning to a community fund and submit proposals to be voted upon: new community center, dog run, rehab project, security contract, trust fund, etc. Vote

Does your solution include an EOSIO Smart Contract?
Yes

What is the link to your Code Repo?
This will only be used for code review purposes
